Chem panel: **Normal**

Tay Sachs: **N/A**

Syphilis: **Nonreactive**

HTLV 1 & 2: **Negative**

CBC: **Normal**

Sickle cell anemia/thalassemia: **Negative**

DONOR NARRATIVE: Donor 3958

Describe your personality (introvert, extrovert, funny, serious, goal-oriented, curious, etc.).

I am vivacious and fun loving. I love spending time with friends and family. My wife is my best friend: we are both very adventurous. We enjoy backpacking in foreign countries, snow skiing in the winter, and water skiing in the summer. I also really enjoy family time, Christmas with all my brothers, sisters, parents, and their children.

What are your special interests and talents?

I love developing creative ideas and organizations. I have started and built 2 companies. My passion lies in film and animation production. I have a great deal of skill in building creative teams, developing scripts and characters, and finding talent.

How would you describe your enjoyment of and skills in the following areas:

math: **I do not like math. However, I do have an aptitude for it. I have written several business plans and built financial models.**

mechanical: **Although I wish I were mechanically oriented, the reality is that I am all thumbs and knuckles when it comes to mechanics.**

athletic: **I am very athletic – I played varsity soccer for 4 years in high school. I regularly snow and water ski. I also enjoy jogging and run when I can.**

musical, artistic, creative: **I am very fortunate to come from a very musical and creative family. I love writing, playing the piano, and drawing on occasion.**

language (what languages do you speak?): **I speak Spanish.**

What are your goals and ambitions in life?

I am pursuing my dream of building and running my own educational entertainment company. I would also like to direct animation and live action films. I would like to build projects and organizations that touch the community and change peoples lives.

Why do you want to be a sperm donor?

I want to give parents as many opportunities to have the family they want as possible. I have adopted 2 children; it has been such a wonderful experience. There are so many different types of agencies and organizations for this. Choice is an important part of being happy. I want parents to also have the choice of having a biracial baby. I would also like to give African American mothers more availability to African American sperm donors, of which I understand there is a shortage.

Did you choose to be an identity-release donor? no. Why did you make this choice?

I would like to remain anonymous because I feel a bit more comfortable with that decision. I have adopted children and I would never want them to feel less important because I have biological children who have come into my life.

What message would you like us to pass on to the people who are getting your sperm?

Good luck. This is an exciting time. This process may be long and frustrating at times, but it is worth it! Persist and enjoy the process. The reward of beautiful healthy children will be well worth it.
